TALK TECHNOLOGY DEVELOPS RELIABLE SPEECH RECOGNITION SOLUTION FOR CARDIOLOGY

Bensalem, PA, August 30, 2001- Talk Technology, the nation's leading supplier of speech recognition/dictation workflow solutions, announces the release of TalkStationCardiology™, expanding on the company's overwhelming success with the TalkStationRadiology and TalkStationPathology applications.

TalkStationCardiology incorporates advanced speech recognition and digital dictation technology with flexible workflow options for the dictation/transcription process, while completely automating the reporting process. It's Cardiology specific language model, developed in cooperation with Zydac .com, allows physicians to easily dictate, edit, code, and sign reports within minutes.

Benefits of TalkStationCardiology include an open speech engine architecture allowing for the most technologically advanced application regardless of vendor. All Talk Technology solutions have the capability to print, fax, or e-mail reports at any time, along with providing as an option TalkStationTeleReport™, allowing authorized users to call in from any phone and hear a final report through state-of-the-art text to speech technology. TalkStation also increases accuracy and decreases turnaround time while producing almost immediate cost savings.

Comments Milan diPierro, Director of Product Management at Talk Technology:

"TalkStationCardiology is just the first of many new products designed to leverage our market leadership position in Radiology into other areas of the Healthcare enterprise. By combining our workflow optimized Radiology solution with a Cardiology language model and structured report generator, we are once again leading the industry in both technology and workflow advances."

Talk Technology, a subsidiary of Agfa Gevaert, is the nation's leading supplier of voice-enabled clinical workflow and reporting solutions. Talk Technology has more than 2500 satisfied users at more than 250 healthcare facilities throughout the country. Talk Technology has led the way in applying speech recognition software to delivering bottom line business results for healthcare institutions. Its core technology, TalkStation, has emerged as the industry's most reliable voice enabled dictation and workflow solution. Talk Technology is dedicated to providing its customers with maximum efficiency through the best clinical workflow solution.

Founded in 1993, Talk Technology is headquartered in Bensalem, Pennsylvania with Research and Development Offices in New York and a network of partners nationwide. Additional information on Talk Technology can be obtained by accessing its homepage at www.talktechnology.com
