

ZyDoc Ranked Third Nationwide in Medical Transcription

Medical Records Institute Competition

Ft. Lauderdale, FL, May 19, 2004. ZyDoc.com Corporation, a technology leader in automated medical documentation solutions, won third place ranking as an outstanding transcription business at the TEPR Recognition Program for Medical Transcription (MT) Businesses. The award was conferred by the Medical Records Institute (MRI), whose mission is to promote and enhance the journey towards electronic health records, e-health, mobile health, and IT-related applications.

ZyDoc was announced as a winner of the Medical Transcription Businesses Recognition Program at the 20th annual TEPR conference. This major industry event attracted nearly 4000 healthcare professionals. It offered a wide range of topics and viewpoints to enable healthcare professionals to stay current with industry trends, and to evaluate the latest healthcare IT solutions. Jeffrey S. Blair, Vice President of The Medical Records Institute, presented the award and stated that "The annual TEPR Awards recognize outstanding healthcare information system solutions. A panel of independent expert industry judges chose the winners after competing companies demonstrated their solutions. Many of the companies competing for these awards had outstanding solutions, but the winners were the best of these. MRI is pleased to recognize outstanding transcription businesses with its first TEPR Recognition Program for Medical Transcription (MT) Businesses." Award Information can be obtained at <http://tepr.com>.

According to James M. Maisel, M.D., Chairman of ZyDoc, "ZyDoc is honored to receive this award from the Medical Records Institute, a leader in defining the requirements for success in the evolving area of electronic medical records (EMR). The MRI has now acknowledged that the problem our industry faces, slow adoption of the EMR, is due to the data entry bottleneck which requires physicians to spend large amounts of time recording medical encounters. Creation of the Medical Transcription Businesses Recognition award by the MRI indicates that use of tools which allow physicians to dictate encounters efficiently with no change in work habits is a solution. The \$24 billion transcription market has confirmed that doctors want to dictate. ZyDoc is the technical leader in bridging the gap between dictation solutions and the EMR."

Dr. Maisel further elaborates, "The award, our growing transcription business, and our success in licensing our transcription infrastructure products to transcription companies, transcriptionists, and EMR vendors are all confirmation that our technical solutions are on the right track. We hope that the award increases ZyDoc's visibility and position in the transcription market place as a technology leader. ZyDoc can provide many smaller transcription companies with Transcription ASP solutions, which will allow them to switch to digital files. Without upfront investments, this switch will leverage the value of speech recognition and the Internet with faster delivery and a wider pool of transcriptionists, while fulfilling HIPAA and security requirements."

"ZyDoc offers state of the art technology such as speech recognition as the first step in the transcription process. Nevertheless, our operational efficiencies and the extension of

our transcription service's value chain have been most responsible for the rapid growth of our business. Our ability to offer same-day facility start up, overnight turnaround, and high accuracy even in unusual specialties has been compelling. Our clients immediately experience relief from backlogs and operational improvements including faster reporting, less chart churning, and fewer disruptive phone calls from referring physicians. ZyDoc clients with multiple offices especially value TrackDoc™, our Web-based HIPAA compliant document management system. TrackDoc™ allows access to records from any location via an Internet browser, and facilitates low risk, transparent, and rapid transition to EMR without any change in work habits. Our transcription clients bear no increase in costs but can now obtain "bedside billing" with immediate routing of jobs for electronic signature, coding, and billing attachments that should result in fewer days for which bills are outstanding and decreased billing cycle time" states Dr. Maisel.

ZyDoc offers a range of solutions that match business needs with dictation solutions. For PC literate physicians, ZyDoc offers its award-winning SpeechDoc reporting system, which facilitates rapid multimodal data capture by accurately inputting information from speech recordings, handwritten text, keyboard, mouse, and pen stylus into speech-optimized knowledge-base templates. SpeechDoc allows physicians to generate professional documentation faster and more economically than other methods allow. It is tightly integrated with the award winning, user-friendly, ZipDoc™ e-Transcription service, which is designed for PC novices and doctors who prefer no change in work habits. Regardless of documentation methods, completed records and dictations are accessible using any Internet browser with ZyDoc's secure TrackDoc™ web-based Chart Management System, which is located in secure world class facilities that withstood the Northeast blackout.

Pricing and Availability

Physicians can enroll directly on the secure www.zydoc.com website and, using low cost digital handheld recorders or the TelDoc 800 service on a per-line basis, can start dictating the same day. Transcription ASP infrastructure solutions are also available to replace legacy and non-HIPAA compliant services, either on a per-minute or per-job basis. The ZyDoc SpeechDoc Reporting System Bundle with next day shipment and a full library of specialty templates is available on turnkey Dell workstations and Toshiba Protégé® M200 Tablet PCs starting at \$6495. We provide multimedia demonstrations, training, and support on a weekly basis via the Internet at <http://zydoc.webex.com> and through an extensive nationwide network of Tech Data, Toshiba, and qualified integrators. For more information on ZyDoc Automated Medical Documentation Solutions visit <http://www.zydoc.com> or send an email to documentation@ZyDoc.com.

About ZyDoc.com Corporation

ZyDoc is a transcription service and software development company that provides automated electronic health record documentation and infrastructure ASP legacy replacement solutions. Physicians, transcriptionists, and other healthcare professionals use these services to produce, organize, and distribute multispecialty patient electronic medical records (EMR). ZyDoc solves the PC illiteracy, data entry bottleneck, implementation, and cost issues plaguing other EMR and transcription companies. It uses transparent embedded technology that leverages front and back-end speech

recognition, workflow enhancements, and the Internet. ZyDoc is a development partner with SUNY Computer Sciences at Stony Brook, a ScanSoft platinum dealer, and an IBM Speech Premier Business Partner.
