

## **ZyDoc Announces New End-to-End Transcription and Computer Assisted Coding Solution at AHIMA 2010**

*ZyDoc, a leader in medical knowledge management and transcription since 1993, has announced the development of MediSapien Computer Assisted Coding (CAC) as an end-to-end, single-vendor solution for dictation, transcription, and coding. MediSapien CAC utilizes proprietary technology to capture, fully code, and insert inpatient and outpatient documentation into EMRs. The product will be demonstrated by ZyDoc in Orlando at the 82nd AHIMA Convention, Booth 1136, September 25-30.*

Hauppauge ([PRWEB](#)) September 26, 2010 -- ZyDoc, a leader in medical knowledge management and transcription since 1993, has announced the development of MediSapien Computer Assisted Coding (CAC) as an end-to-end, single vendor solution for dictation, transcription, and coding. Utilizing proprietary technology to capture, fully code, and insert inpatient and outpatient documentation into EMRs, MediSapien CAC is the latest addition to the new ZyDoc Medical Knowledge Management Suite. MediSapien CAC will be demonstrated by ZyDoc in Orlando at the 82nd AHIMA Convention, Booth 1136, September 25-30.

"As a single-vendor solution for transcription, advanced computer assisted coding, and EMR population," states James Maisel, MD, ZyDoc Chairman, "MediSapien CAC offers a powerful advantage over other solutions on the market. ZyDoc can start up a client within days. Support for SNOMED CT, ICD-9, CPT-4 and other terminologies means that we can immediately help facilitate EMR meaningful use, and assist with RAC preparation. Hospitals will also realize substantial cost savings by leveraging the data for ORYX, PQRI, POA justification, and QA."

At AHIMA, ZyDoc officially begins the rollout of its new ZyDoc Medical Knowledge Management Suite, including MediSapien modules. Featuring ZyDoc e-Transcription, MediSapien CAC, and ZyDoc Clinical Data, the suite offers highly efficient integrated and standalone solutions for hospital environments, practice management, academic research, and strategic business analysis. AHIMA attendees will have the opportunity to view an interactive demo at the ZyDoc booth. Following the convention, a web demo will be available to the press and to qualified industry representatives by contacting ZyDoc Business Development.

ZyDoc will continue its exhibition schedule at the 2010 MGMA, RSNA, and AAO annual meetings, and at the New Jersey Technology Council HIE Summit in December. Details and ZyDoc exhibitor dates are available at [www.ZyDoc.com](http://www.ZyDoc.com).

### **About ZyDoc**

Founded in 1993, ZyDoc is a full service medical informatics company providing infrastructure services to facilitate EMR adoption, meaningful use, and interoperability. ZyDoc leverages information technology to provide medical knowledge management solutions for health care providers, hospital systems, health information exchanges, and pharmaceutical research. Award-winning services by ZyDoc feature ASP applications, EMR integration, a HIPAA-compliant data interchange platform, and proprietary Quality Feedback System. The user-friendly web-based technology platform is supported by the U.S.-based ZyDoc Operation Center, which is operational 24/7. ZyDoc has garnered recognition from the medical informatics, speech recognition, and software industries, and in 2004, was ranked third nationally in its market segment by

the Medical Records Institute. In 2010, ZyDoc continues as an industry leader in the development of cutting-edge cloud-based technology for medical knowledge management.
